

SOS

Calls for help even if you can't

100% global

Automatic Monitoring & Alert System for early awareness
Reduces rescue response time by up to 90%

Never again stay unnoticed in a critical situation.

A*LIVE SmartSafety
4D Live Tracking + Life Saving

Every year more than 20.000 people disappear or die in outdoor activities. Don't be one of them!

Just because nobody gets aware early enough that you might be in trouble. Or one can't call for help as only 10% of the earth is covered by cellular networks. Or your exact position is unknown.

We provide the missing 90% of coverage. Realtime. With your exact position and global 2-way-communication. We make others aware!

SmartSafety Main Features

- 100 % global real-time tracking by Iridium satellite, GSM, 3G/4G, GPS + Galileo
- Flexible data plans: pay only when activated, no costs in StandBy
- Automatic Dead-man's switch with PAUSE & REST function to avoid false alarms
- Detects triggers like HALT, HEIGHT, ZONE, CRASH, EXTERNAL (Bluetooth.5) and more
- Manual SOS call and cancellation of any alert at any time (enables real-life tests)
- Unlimited Layers & Fences, Adhoc- / Dynamic-Roaming-Geofences (anchor alarm etc.)
- Live Feedback on tracking device with automatic alarms (e.g. Zone alert)
- Flexible notifications, 2-step-escalation: first alerts team & friends, then 911 / 112 / GEOS
- Notifications through SMS, Email, Telegram, Webhooks, InReach RescueDevices
- Each trigger and notification can be limited to certain times of the day
- Global 2-way-text-communication with A*LIVE and InReach (SMS, Email & more)
- RescueNavigation for Smartphones and InReach for fast near-field localization
- Competition features with LiveRanking, dynamic buoys, automatic evaluations & more
- Rest-API to connect to external systems

Also available for these tracking devices

¹) Standby Periods € 0 / basic yearly subscription fee starting from € 49

²) no external triggers, ³) also no crash detection, reduced alarm feedback.

SmartSafety Simple is Safe

No buttons. No cables.

First Setup.

Alarm scenarios are pre-set and can be adapted by few clicks, as well as alarm endpoints for SMS, voice (on P99), Email, Rest-API or RescueNavigation. **SmartSafety** profiles are available for mountain-biking, windsurfing, kiteboarding, climbing, hiking, sailing, skiing, snowboarding, lone-workers, hunters, and more. Customized profiles available too.

1 Turn on the tracker.

Tracking is activated automatically when the device is taken off the charging station (inductive Qi-standard). Your friends can monitor your tracking live on a private website. If you want they can get an automatic notification when you start and finish your activity. Daily KML/GPX/IGC files are available as well as statistics and rankings for competitions, incl. routing control (e.g. dynamic bouys). Always 100% global on A*LIVE & InReach.

2 You are safer.

The automatic dead-man switch checks if you are still moving "normally", e.g. within the geofence, within your height limits, if you drift away, if you crash and more. In addition you can always trigger a manual SOS, cancel any alarm, or attach an external trigger by Bluetooth5, like an avalanche airbag or pulse meter. You can also pause your activity or use rest zones to avoid false alarms.

SmartSafety States include: **OK PAUSE REST BATTERY SOS CRASH HALT HEIGHT ZONE DEADMAN EXTERN**

SOS In case of emergency?

For each scenario (e.g. manual SOS or automatic CRASH / HALT alarm), different notification chains can be assigned with a **2-step escalation**. Example: At first SmartSafety notifies about your position via Priority-SMS and Email to friends and team for companion rescue. At their request or after a timeout without reaction professional rescue facilities such as mountain rescue or coast guards (via 911 / 112 / GEOS) are called, and keep in touch with you or your preset emergency contacts.
